

## iMAP Remote

Remote control and monitoring of iSURVEY's data acquisition and data processing operations

Set-up Diagram for iMAP Remote

All types of operations are based on a combination of our different iPRODUCTS as iNAV®, iSAFE®, iROV®, iMON®, iCABLE®, iMAP®, and iLINK™ to ensure both simplicity, as well as the use of well proven software. Remote Video and Remote Speech can also be made available.

### iMAP Remote Data Acquisition

The Data Acquisition system onboard can be accessed and operated remotely using the iMAP Remote Data Acquisition solution. Online quality control (QC) and Near Online QC parameters can be used to ensure that all data collected is according to specifications, as well as to avoid data gaps and poor-quality data.

### iMAP Remote Data Processing

To standardise across all types of operations, and to avoid transferring huge data sets over satellite communication, all survey data is kept onboard and accessed and processed remotely using the iMAP Remote Data Processing Solution. This also allows for more rapid QC and faster delivery, for offshore decision making.

Automation processes are continuously developed to speed up the processing and to improve the final delivery. In special cases, the data can be optimised, compressed and transferred to shore for remote processing.

### iUNIFY

For projects involving several departments, it is important to co-ordinate the survey logs. Logged files are monitored and linked to survey lines and logs in a database. Reports on QC and progress status can be accessed locally, remotely and by the Client.

### Future Developments

Continuous development is ongoing, involving new available technologies as required.
